How to add a text to a picture using python

April 25, 2013 (<http://www.xappsoftware.com/wordpress/2013/04/25/how-to-add-a-text-to-a-picture-using-python/>) by gg1 (<http://www.xappsoftware.com/wordpress/author/gg1/>)

 (mailto:?Subject=How to add a text to a picture using python&Body=Python provides a lot of useful tools and libraries to handle images. If you want to modify an image you [...] <http://www.xappsoftware.com/wordpress/2013/04/25/how-to-add-a-text-to-a-picture-using-python/>)  ([http://www.facebook.com/sharer.php?](http://www.facebook.com/sharer.php?u=http://www.xappsoftware.com/wordpress/2013/04/25/how-to-add-a-text-to-a-picture-using-python/)

[u=http://www.xappsoftware.com/wordpress/2013/04/25/how-to-add-a-text-to-a-picture-using-python/](http://www.xappsoftware.com/wordpress/2013/04/25/how-to-add-a-text-to-a-picture-using-python/))  (<https://plus.google.com/share?url=http://www.xappsoftware.com/wordpress/2013/04/25/how-to-add-a-text-to-a-picture-using-python/>)  (<https://twitter.com/share?url=http://www.xappsoftware.com/wordpress/2013/04/25/how-to-add-a-text-to-a-picture-using-python/&text=How to add a text to a picture using python&hashtags=simplesharebuttons>)  (<http://www.linkedin.com/shareArticle?mini=true&url=http://www.xappsoftware.com/wordpress/2013/04/25/how-to-add-a-text-to-a-picture-using-python/>)

Python provides a lot of useful tools and libraries to handle images.

If you want to modify an image you can use the PIL (Python Image Library) to apply filters, draw a line, draw a rect, draw an oval, draw an image, or draw a text on the image.

In the following few lines of code I'm going to show to you how to add a copyright mark onto your own images.

The file we want to mark is the following:

<http://www.xappsoftware.com/wordpress/2013/04/25/how-to-add-a-text-to-a-picture-using-python/>

MicroProgrammo
(<http://www.microprogrammi.it>)

```

import PIL
from PIL import ImageFont
from PIL import Image
from PIL import ImageDraw
font = ImageFont.truetype("/usr/share/fonts/truetype/ubuntu-font-family/Ubuntu-B.ttf", 25)
imageFile = "gg.png"
im1=Image.open(imageFile)

draw = ImageDraw.Draw(im1)
draw.text((0, 0), "copyright/left xappsoftware.com", (255, 255, 0), font=font)
draw = ImageDraw.Draw(im1)
draw = ImageDraw.Draw(im1)
im1.save("marked.png")

```

(<http://www.xappsoftware.com/wordpress/wp-content/uploads/2012/12/Screen-Shot-2012-12-27-at-23.00.04.png>).

```

1 # Importing the needed library
2
3 import PIL
4 from PIL import ImageFont
5 from PIL import Image
6 from PIL import ImageDraw
7
8 # Loading Fonts...
9 # Note the following line works on Ubuntu 12.04
10 # On other operating systems you should set the correct path
11 # To the font you want to use.
12 font = ImageFont.truetype("/usr/share/fonts/truetype/ubuntu-font-family/Ubuntu-B.ttf", 25)
13
14 # Opening the file gg.png
15 imageFile = "gg.png"
16 im1=Image.open(imageFile)
17
18 # Drawing the text on the picture
19 draw = ImageDraw.Draw(im1)
20 draw.text((0, 0), "copyright/left xappsoftware.com", (255, 255, 0), font=font)
21 draw = ImageDraw.Draw(im1)
22
23 # Save the image with a new name
24 im1.save("marked_image.png")

```

The program is really simple and self explanatory:

We load the PIL library

We load the font we want to use (this can be different on different operating systems)

We load the image we want to modify

We draw the string onto the image

We save back the image with a different name.

After running this program the file will become as follows:

Gg1

Español:

Hola, muchas gracias por el aporte, me ha funcionado perfectamente el código que has dejado, he probado tantos y por fin este código funcionó.

Gracias nuevamente y saludos!!! 😊

Inglés:

Hello, thank you very much for the contribution, it has perfectly worked for me the code that you left, I tried so many and so this code worked.

Thanks again and greetings !!! 😊

Is there any way to change the size of the text?
